The **Design Platform** - a **hub of services** to support **European companies** engaged in **chip design**.

The Design Platform is implemented via **two main classes of entities**:

- The **Platform Coordination Team (PCT)** which coordinates the Design Platform, establishes framework agreements with EDA/IP suppliers and provides access to a central cloud service.
- **Design Enablement Teams (DETs)** each of which is in charge managing a distributed cloud instance and provides dedicated application engineering support.

The **PCT and DETs collaborate** to design and implement the overarching technical implementation of the platform and design interfaces with the distributed services, as well as ensuring the overall neutrality of the platform

Scope: Select a number of Design Enablement Teams

- 2. Design flow support and customisation:** assist users in setting up and customising design environments and flows.
- 3. Application engineering:** offer dedicated application engineering support, addressing specific user needs and challenges.
- 4. Access to Process Design Kits (PDKs):** provide users with access to the necessary PDKs and ADKs for their design projects.
- 5. Design expertise:** provide users with access to the necessary design expertise for their design projects.
- 6. Prototyping and fabrication services:** facilitate prototyping and fabrication services including packaging and testing
